

PROJECT REPORT

Name: Bidisha Banik

Registration number: 25MEI10053

Branch: CSE in cybersecurity

Year: 2025-2030

Course code: CSE0001

Task-1-presentation : I have created my digital literacy awareness infographic using Canva , which is a user-friendly online design tool. The infographic focuses on key aspects of digital literacy such as understanding what digital literacy means, the use of important digital tools for students, safe internet practices, and maintaining a professional online presence.

In the infographic , I explained that digital literacy is the ability to use digital technologies effectively and responsibly. I also included examples of useful tools like GitHub for coding, Google classroom for learning, and Zoom for communication. Additionally, I highlighted important safety practices such as using strong passwords and avoiding suspicious links. I also emphasized the importance of maintaining a professional profile on platforms like LinkedIn.

One interesting part of this task was designing the layout and choosing appropriate icons to make the infographic visually appealing. However, I find it slightly challenging to present all the information clearly within a single page without overcrowding it.

Overall, this task helped me understand the importance of digital literacy in student life.

Task-2-portfolio : For this task, I created my digital portfolio on three platforms: GitHub, LinkedIn, and Kaggle. GitHub is mainly used for sorting and sharing coding projects, which will help me showcase my work in the future. LinkedIn is a professional networking platform where I added my educational details and will use it to connect with professionals and explore internship opportunities. Kaggle is a platform for data science and learning, where I can practice skills and participate in competitions.

Creating these profiles helped me understand the importance of maintaining a professional online presence. Each platform serves a different purpose but together they build a strong digital identity.

Over the next four years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile by adding achievements and skills, and use Kaggle to enhance my technical knowledge. This will help me prepare for internships and job opportunities in the future.

Task-3-platforms : For this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem called “Solve Me First,” which helped me understand the basics of codingvpractice platforms.

For the collaboration part, I created a Google form titled “Digital Literacy Awareness Quiz.” The form contains five questions related to digital literacy, including multiple-choice and short answer questions. I also viewed the responses section, which automatically stores answers in a Google sheet.

These platforms are very useful for academic purposes. HackerRank helps in improving coding skills through practice, while Google Forms can be used to create quizzes, surveys, and collect data efficiently. Overall, this task helped me understand how digital tools can support both learning and collaboration.

Task-4-email-socialmedia : Poor digital communication can create serious problems. For example, if a student sends an email to a professor without a proper subject line or uses informal language, it may appear disrespectful and may not receive a response. Similarly, unclear or rude communication can create misunderstandings.

In such situations, proper email etiquette is very important. A clear subject line, polite greeting, and structured message help in effective communication. Using respectful language and proper sign-off also creates a positive impression.

This task helped me understand the importance of professional communication in academic and professional environments. I learned how small details like tone and structure can make a big difference in how a message is received.

Task-5-cybercrime : While researching cybercrime, I was surprised to learn how easily people can be tricked into online payment fraud. Many scams appear genuine, making it difficult to identify them. I found it interesting that even a small mistake, like sharing an OTP or clicking on a suspicious link, can lead to financial loss.

This task made me more aware of online safety and the importance of being cautious while using digital platforms. One habit I will change is being more careful before clicking on any unknown links or messages. I will also make sure never to share sensitive information like OTP or UPI PIN with anyone.

Overall, this task helped me understand the risks involved in online transactions and the importance of cybersecurity awareness.

Conclusion: The Digital Literacy project provided me with a comprehensive understanding of essential digital skills required in today's world. Through the five tasks, I have learned how to create informative content, build professional digital presence, and gained knowledge about proper email communication and the importance of maintaining etiquette in online proper email communication and the importance of maintaining etiquette in online interactions. Additionally, researching cybercrime helped me become more aware of online threats and safety practices. Overall, this project enhanced my confidence in using digital tools responsibly and prepared me to navigate the digital environment more effectively in my academic and professional journey.
